

MERCHROOM - Entity Relationship Diagram

Page 1: relationships in the active Mongoose schemas. Page 2: field guide and seed.js baseline.

MERCHROOM - Database Field Guide and Seed Baseline

Plain-language reference: what each collection stores, how seed.js fills it, and what is not persisted yet.

Catalog

Category

Store grouping. Seed: 5 rows (apparel, hat, fan merchandise, album, merchandise).

Artist

Product owner/brand. Seed: 14 artists/groups, including Taylor Swift, SACIT and CHAKSARN.

Product

Sellable item. Seed: 32 products with price, quantity, origin, style, medium, sizes, tags and category/artist ObjectIds.

Customer and purchase

User

Account and role. Seed: 15 accounts: 9 customers and 6 admins. Password is hashed before save.

Cart + Cart item

Current shopping choices. Each item stores productId, optional variant_id and quantity. Seed clears Cart but creates no initial cart.

Order + Order item

Completed checkout record. Order item snapshots productId/name/price/quantity so past receipts do not change with catalog edits. Seed: 3 orders.

Payment

Payment attempt/result for an order. Holds Omise charge reference/card summary. Seed clears Payment but creates no initial payment.

Trust, reporting and gaps

Review

Customer score 1-5 and comment for one product. Seed clears Review but creates no initial review.

ProductChangeLog

Admin audit: who changed which product, action and before/after data.

PromoCode

Discount catalogue with active state, expiry and usage count. It is currently not linked to Cart or Order in the schema.

Seed-vs-schema note

seed.js includes memberSince, orderNumber, trackingNumber and paymentStatus in source mock data. The active User/Order schemas do not save these fields, so they are documentation/mock-only until fields are added.
